Project title: CDNT Car Rental System

Background: CDNT Car Rental System is a car rental business that focuses on renting cars to its clients. Clients would be able to choose from multiple types of cars by size, for example trucks, sports cars, vans, family cars and usual cars. The CDNT Car Rental has drivers that delivers the cars in nearby cities and can drive trucks to help clients in transporting their goods. The way it interacts with the clients is through an account system that keeps personal data of the client and requests. The CDNT Car Rental has a yearly subscription system that offers a certain discount on each rent.

Keywords:

Account system

Database

Different type of cars

Drivers

Clients
